

TARGET

BENTONITE CLAY POWDER

Key Points:

- ✓ 100% Natural Clay

Product Description

Bentonite Clay has long been used in animal feed to help bind mycotoxins in the gut, helping to prevent mycotoxin build up and absorption. It has also been shown to help improve feed utilization by increasing the length of the villi in the small intestine. It is a good source of bioavailable silica which has an important role in the development of new bone helping in the calcification process.

Canine

Commonly used to help relieve digestive issues like constipation and bloating, Bentonite Clay can also help your dog recover from vomiting and diarrhea due to its high absorption rate. It has also been shown to be beneficial when applied externally to help soothe skin and allergy issues.

Carp

Studies have indicated that carp who are exposed to oxidative stress benefit when their diet is supplemented with clay to help reverse the oxidative damage to the liver and kidneys.

Horses

Containing many beneficial minerals and nutrients, Bentonite Clay is commonly used on horses both internally and externally. As a digestive aid, Bentonite Clay has highly absorptive properties aiding digestive health and externally it can also be used for soaking wounds, as a poultice or to form a protective scab.

Pigs

Clays have been a standard ingredients in pig feed for several decades due to their highly absorption properties. They are shown to be beneficial in terms of the balancing of heavy metal or dioxins in the gastrointestinal tract, and are commonly used to prevent diarrheal infections in weaned pigs.

Poultry

Used as a feed additive in the broiler diets Bentonite Clay can improve litter characteristics and performance. Studies have also indicated that the use of bentonite can help increase egg production, egg weight and eggshell strength.
